

RDM+ :: Remote Desktop for Mobiles

For Internet-connected computers (Web service)

Getting Started Guide

RDM+ (Remote Desktop for Mobiles) is a communication tool that gives you the unique ability to connect to your desktop computer from any Internet-connected computer and interact with it remotely. With Remote Desktop for Mobiles you can not only observe the remote desktop in a web browser window but perform different usual keyboard and mouse commands.

RDM+ software consists of two components: the desktop part and the client module.

1. the desktop part (RDM+ Desktop) should be installed on the remote computer;
2. the client module (RDM+ Web service).

To work with your computer remotely, you should install RDM+ Desktop and sign up for RDM+ Web service.

1. Signing up for RDM+ Web

Point your web browser to: web.rdmplus.com

First of all you have to sign up for RDM+ Web by filling a very simple form.

Note: If you have already signed up for RDM+ iPhone just use this account.

Using the email and password you will be able to access your own computer list.

To ensure flawless work of RDM+ Web service you need to enable **JavaScript** in your browser.

Note: RDM+ Web works on Opera 9.0 and higher, Mozilla Firefox 1.5 and higher, Safari 3 and higher without any additional software. Internet Explorer 6 and higher and other browsers require Java 1.5 and higher.

Opera users may enable right click support. For that go **Tools->Preferences->Advanced ->Content->JavaScript Options->Allow script to receive right clicks** in your browser window.

2. Registration and trial

Please register your RDM+ Web account with the license code, which you have received with the purchase. To do this click Register menu item and insert the license code into corresponding field. You may also use RDM+ Web in trial mode, which has time limits.

3. Computer list

You can add a new computer to your computer list, edit computer data and connect to the specific computer from the list. Press **Add computer** button to add a new computer to the computer list.

Note: You may enter the computer number with or without dashes.

You may decide whether to ask you a password to the computer every time you connect to it or to store this password and never ask you. The first way is safer and it is selected by default. But the second one is quicker. To change the value of the parameter select/deselect **Ask password when connecting** checkbox.

Note: The password must coincide with that you have entered in RDM+ Desktop after the installation. You may change the password by selecting **Accounts - Password** in RDM+ Desktop.

Remember that account name is case insensitive, but the password is case sensitive!

A demo computer is added to your computer list by default. Its computer number is **10-000-000**, account name is demo. No password is required. You may connect to it and make sure that RDM+ Web works properly.

The demo computer works in demo mode. It only shows the work with the remote desktop and displays several examples of how to execute management commands. The complete list of management commands, mouse and keyboard controls is disabled.

To edit the information which you entered during signing up, click **Settings** link.

To connect to the remote computer click the corresponding computer link.

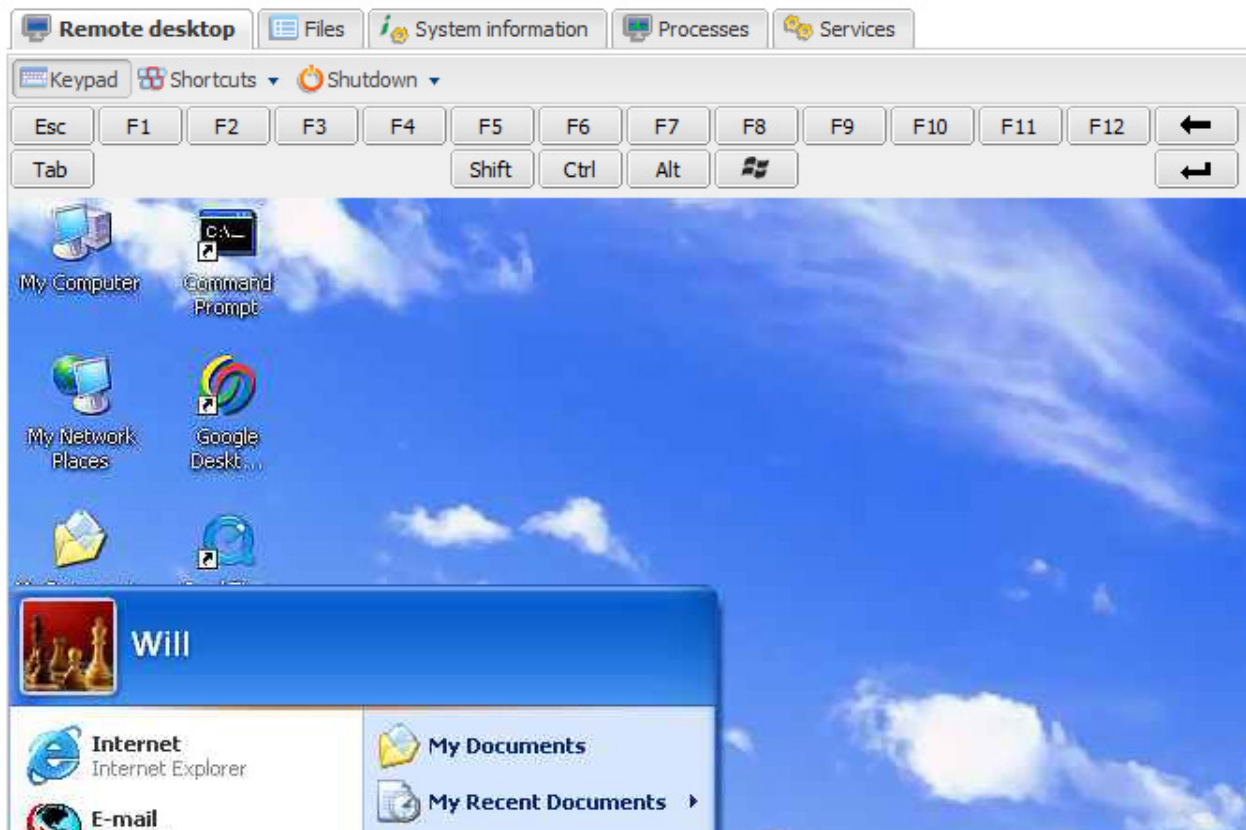

The screenshot displays the 'Computer List' interface. At the top, there is a title 'Computer List'. Below it, there are three computer entries, each with a computer icon, a name (e.g., 'Demo computer (demo@10000000)'), and 'Edit' and 'Delete' buttons. A '+ Add computer' button is located at the bottom left of the list. An 'Add Computer' dialog box is open in the center, featuring the following fields and options: 'Computer #' (text input), 'Description' (text input), 'Account name' (text input), a checked checkbox for 'Ask password when connecting', and a 'Connection bitrate' dropdown menu set to 'Quick'. At the bottom of the dialog are 'Save' and 'Cancel' buttons. A note box at the bottom of the dialog contains the text: 'Note: To get access to the remote computer you should install RDM+ Desktop on this computer. [Download RDM+ Desktop now.](#) The computer number will be assigned to your computer after the installation.'

4. Remote desktop control

You can freely connect to any saved computer by clicking the corresponding computer link. In case of successful connection to the selected remote computer you will see the remote desktop.

You can control the remote desktop by using both onscreen buttons and direct mouse and keyboard operations.

You can also manage files and control the system information by opening Files and Manage tabs respectively.

5. Support

You can find more information about RDM+ on our site: www.rdmplus.com
